SUMMARY

Software Engineering graduate with hands-on experience building production-ready backend systems and full-stack applications using ASP.NET Core, FastAPI, and modern web technologies. Proven ability to design, develop, and deploy real-world systems, including incident management platforms, SLA monitoring systems, and enterprise workflow tools.

Strong in problem-solving, system design, and building scalable, reliable software under real-world constraints. Passionate about high-performance engineering environments where rapid learning, ownership, and impact are key.

TECHNICAL SKILLS

PROGRAMMING LANGUAGES

- C#
- Python
- JavaScript
- SQL

TOOLS & TECHNOLOGIES

- Git & GitHub
- RESTful API Development
- Docker (Basic)
- Microsoft 365

CONCEPTS

- Software Development Lifecycle (SDLC)
- Basic System Design Principles

FRAMEWORKS & LIBRARIES

- ASP.NET Core (MVC)
- React.js
- Next.js
- FastAPI
- Entity Framework Core

ENGINEERING STRENGTHS

- Backend system design
- Database design & query optimization
- Workflow automation & lifecycle systems
- Problem-solving under real-world constraints

DATABASES

- SQL Server
- PostgreSQL

WORK EXPERIENCE

ICT Intern – Ndabase Printing Solutions

Oct 2025 – Feb 2026

- Developed backend modules for an enterprise device lifecycle management system using ASP.NET Core and Entity Framework Core
- Designed and implemented workflows for device tracking, allocation, and dispatch operations
- Optimized SQL Server queries and database structures to improve performance and data consistency
- Collaborated with stakeholders to translate operational requirements into scalable system features

Hackathon Tech support - KZN Tech Imbokodo Hackathon

Aug 2025 – Aug 2025

- Provided real-time technical support during a high-pressure 48-hour hackathon
- Assisted participants with environment setup, connectivity, and troubleshooting
- Helped maintain stable development environments for uninterrupted workflow

Tutor – Durban University of Technology

Apr 2025 – Oct 2025

- Assisted first-year ICT students with programming fundamentals and problem-solving techniques
- Delivered structured lessons on logic, control flow, and coding principles
- Improved student understanding through practical examples and consistent academic support

PROJECTS

Hawkeye – Incident Reporting System

- Designed and built a full-stack system enabling real-time incident reporting and tracking across multiple users
- Engineered a structured incident lifecycle with status transitions, audit logging, and role-based access control (Admin/Resident)
- Implemented location-based intelligence to improve incident visibility and decision-making
- Built backend services using Flask, PostgreSQL, and SQLAlchemy

DeviceDesk – Enterprise Device Lifecycle Management System

- Contributed to an enterprise system for tracking, allocation, and dispatch of ICT devices
- Developed backend modules using ASP.NET Core and Entity Framework Core
- Implemented structured workflows supporting operational efficiency and auditability
- Worked with SQL Server for querying, migrations, and performance optimization

OLI – Operational Lifecycle Intelligence System

- Designed a backend system to monitor workflows and track SLA compliance in real time
- Implemented delay detection logic with automated alerting and escalation workflows
- Built scalable API services using FastAPI, PostgreSQL, and Docker
- Focused on operational visibility, performance tracking, and decision support systems

Fleet Rental System – Fleet Management Platform

- Developed a database-driven system for vehicle tracking, contract management, and operations
- Designed structured data models to support logistics workflows
- Implemented dashboards and reporting features for operational monitoring
- Built using modern web technologies and relational databases

EDUCATION

Diploma in ICT (Applications Development)

Feb 2023 - Nov 2025

Durban University of Technology

- Coursework in software development lifecycle, database design, and UI/UX.
- Hands-on projects: Doctors' Appointment Booking System (ASP.NET MVC); Weather Forecast Website (React.js & API); Currency Converter (JavaScript).
